# **APPLIED MATHEMATICS (COMMON)**

Subject Code		Theory					Credits
1600301	No.	of Periods Per V	Veek	Full Marks	:	100	03
1000501	L	T	P/S	ESE	:	70	
	03	_	_	TA	:	10	
	_	_	_	CT	:	20	

	Name of Topics	Hrs/week	Marks
Unit -1	Integration:	, σσπ	
-	1.1 Definition of integration as anti-derivative. Integration of		
	standard function.		
	1.2 Rules of integration (Integrals of sum, difference, scalar multiplication).		
	1.3 Methods of Integration.		
	1.3.1 Integration by substitution		
	1.3.2 Integration of rational functions.		
	1.3.3 Integration by partial fractions.		
	1.3.4 Integration by trigonometric transformation.		
	1.3.5 Integration by parts.		
	1.4 Definite Integration.		
	1.4.1 Definition of definite integral.	12	20
	1.4.2 Properties of definite integral with simple problems.	12	
	1.5 <b>Applications of definite integrals.</b> 1.5.1 Area under the curve.		
	1.5.1 Area under the curve. 1.5.2 Area between two curves.		
	1.5.2 Area between two curves.  1.5.3 Mean and RMS values		
Unit -2	Differential Equation		
Onit -2	2.1 Definition of differential equation, order and degree of		
	differential equation. Formation of differential equation for		
	function containing single constant.		
	2.2 Solution of differential equations of first order and first degree such as		
	variable separable type, reducible to Variable separable,		
	Homogeneous, Nonhomogeneous, Exact, Linear and Bernoulli	10	15
	equations.		
	2.3 Applications of Differential equations.		
Unit - 3	Laplace Transform		
	3.1 Definition of Laplace transform, Laplace transform of standard functions.		
	3.2 Properties of Laplace transform such as Linearity, first shifting,		
	second shifting, multiplication by t <sup>n</sup> , division by t.		
	3.3 Inverse Laplace transforms. Properties- linearly first shifting, second	08	14
	shifting. Method of partial fractions,		
	3.4 Convolution theorem.		
	3.5 Laplace transform of derivatives,		
	3.6 Solution of differential equation using Laplace transform (up to		
Unit 4	second order equation).		
Unit - 4	Fourier Series 4.1 Definition of Fourier series (Euler's formula).		
	<ul><li>4.1 Definition of Fourier series (Euler's formula).</li><li>4.2 Series expansion of continuous functions in the intervals</li></ul>		
	<u> </u>	08	07
	$(0,2l),(-l,l),(0,2\pi),(-\pi,\pi)$		
	4.3 Series expansions of even and odd functions.		
	4.4 Half range series.		

Unit - 5	Numerical Methods	05	07
	5.1 Solution of algebraic equations		
	Bisection		
	method.		
	Regularfalsi		
	method.		
	Newton – Raphson method.		
	5.2 Solution of simultaneous equations containing 2 and 3 unknowns	05	07
	Gauss elimination method.		
	Iterative methods- Gauss seidal and Jacobi's methods.		
	Total	48	70

Mathematics for polytechnic	S. P. Deshpande	Pune Vidyarthi Griha Prakashan, Pune
Calculus: single variable	Robert T. Smith	Tata McGraw Hill
Laplace Transform	Lipschutz	Schaum outline series.
Fourier series and boundary value problems	Brown	Tata McGraw Hill
Higher Engineering Mathematics	B. S. Grewal	Khanna Publication, New Dehli
Introductory Methods of Numerical analysis	S. S. Sastry	Prentice Hall Of India, New Dehli
Numerical methods for scientific & engineering computations	M. K. Jain & others	Wiley Eastern Publication.

# ELECTRICAL CIRCUITS & NETWORK (ELECTRICAL ENGINEERING GROUP)

Subject Code		Theory					Credits
1620302	No.	of Periods Per V	Veek	Full Marks	:	100	03
1020302	L	T	P/S	ESE	:	70	
	03	_	_	TA	:	10	
	_	_	_	CT	:	20	

I	Name of Topics	Hrs/week	Marks
Unit -1	Review of Basic concepts of electrical Circuit	•	
	1.1 Electric Circuit Elements R,L,C		
	1.2 Energy Sources	06	04
	1.3 A.C. waveform and definition of various terms associated with it	00	04
	1.4 Response of pure R, L, and C to AC supplies.		
	Vector Representation of alternating quantity.		
Unit -2	Single phase AC Circuits		
	2.1 Series AC circuits R-L, R-C and R-L-C circuits. Impedance, reactance,		
	phasor diagram, impedance triangle, power factor, Average power,	12	22
	Apparent power, Reactive power, Power triangle (Numerical)		
	2.2 Series Resonance, quality factor (Numerical)		
	2.3 Parallel AC circuits R-L, R-C and R-L-C circuits. Admittance,		
	Susceptance, Solution by admittance method, phasor diagram and		
	complex Algebra method. (Numerical) Parallel resonance, quality		
	factor.		
	2.4 Comparison of series and Parallel circuits.		
Unit - 3	Poly phase AC Circuits		
	3.1 Generation of three phase e. m. f.		
	3.2 Phase sequence, polarity marking		
	3.3 Types of three-phase connections.	10	16
	3.4 Concept of unbalanced load and balanced load.	10	10
	3.5 Line, phase quantities and power in three phase system with balanced		
	star and Delta connected load & their interrelationship		
_	3.6 Advantages of polyphase circuits over single phase circuits		
Unit - 4	Principles of circuit Analysis (AC and DC circuits)		
	1.1 Mesh analysis.(Numerical)	08	10
	1.2 Node analysis with voltage current source .(Numericals) Star/delta &		
	Delta/star transformations.(Simple Numericals)		
Unit - 5	Network Theorems (Statement, procedure, applications and		
	areas of applications, Simple Numerical)		
	5.1 Superposition Theorem	10	18
	<ul><li>5.2 Thevenin's Theorem</li><li>5.3 Norton's Theorem</li></ul>	10	18
	<ul><li>5.4 Source conversion /ideal voltage and current source</li><li>5.5 Maximum power transfer Theorem</li></ul>		
	1		
	Total	48	70

Text /Refe	erence Books:	
Name of Authors	Titles of the Book	Name of the Publisher
Boylested R.L.	Introductory circuit Analysis.	Wheeler, New Delhi
Edminister	Schaum online series Theory and problems of Electric circuits	T. M. G. H., Newyork

# ELECTRICAL MEASUREMENTS (ELECTRICAL ENGINEERING GROUP)

Subject Code		Theory					Credits
1620303	No.	of Periods Per V	Veek	Full Marks	:	100	03
1020505	L	T	P/S	ESE	:	70	
	03	_	_	TA	:	10	
	_		_	CT	:	20	

	Name of the Topic	Hours	Marks
Unit -1	Fundamentals of Measurement		
OIIIt - I	1.1 Purpose of measurement and significance of measurement	05	08
	1.2 Various effects of electricity employed in measuring instruments.	0.5	00
	1.3 Desirable qualities of measuring instruments.		
	1.4 Classification of Instruments.		
	1.5 Types of errors		
	1.6 Different types of torque in Analog Instruments.		
Unit - 2	Measurement of Current and Voltage		
	2.1 Construction and principle of PMMC, MI & Dynamometer type		
	Instrument.		
	2.2 Production of torque :methods.		
	2.3 Principles of Voltage and Current measurement.	10	14
	2.4 Range Extension of Ammeter and Voltmeter		
	2.5 Different Methods of range extension of Ammeter and Voltmeter.		
	2.6 Calibration of Ammeter and Voltmeter.		
	2.7 Instrument transformers (CT & PT)		
Unit -3	Measurement of Power		
	3.1 Concept of power in A.C. Circuit		
	3.2 Principle and Construction of dynamometer type wattmeter.		
	3.3 Errors and their compensation.		
	3.4 Polyphase wattmeter.		
	3.5 Multiplying factor of wattmeter.		
	3.6 Measurements of power in 3 phase circuit for balanced and unbalanced	10	14
	load by one wattmeter method, two wattmeter method.		
	3.7 Effect of power factor variation on wattmeter readings in two		
	wattmeter method.		
	3.8 Measurement of reactive power in three phase balance load by one		
	wattmeter method and two wattmeter method.		
	3.9 Digital Wattmeter.		
Unit -4	Measurement of Electrical Energy		
	<b>4.1.</b> Concept of electrical energy.		
	4.2 Constructional feature & principle of working of single phase and		
	three-phase induction type energy meter.	07	10
	4.3 Different types of errors and their compensation.		
	4.4 Calibration of energy meter.		
	4.5 Electronic energy meter.		
Unit -5	Constructional features and working principles of other Meters		
	5.1 Single phase and three phase Power Factor Meter( only dynamometer type).		
	5.2 Frequency meter (Weston and Ferro dynamic type).	00	40
	5.3 Sychronoscope.	08	10
	5.4 Phase sequence Indicator.( Rotating type only)		
	5.5 Clip-on-mmeter.		
	5.6 Q-meter.		

Unit -6	Meas	surement of Circuit Parameters			
	6.1	Classification of Resistance, Low, Medium and High.			
	6.2	Methods of Measurements of Low, Medium and High. Resistance			
		(Kelvin Double bridge, wheatstone bridge and Megger)		08	14
	6.3	Measurement of Earth resistance- Earth tester (Analog & Digital)		UU	14
	6.4	Digital Multimeter.			
	6.5	Introduction to A.C. Bridges.			
	6.6	L.C.R. Meter.			
			Total	64	70

# **ELECTRICAL POWER GENERATION (ELECTRICAL ENGINEERING GROUP)**

Subject Code		Theory					Credits
1620304	No.	of Periods Per V	Veek	Full Marks : 100			03
1020504	L	T	P/S	ESE	:	70	
	03	_	_	TA	:	10	
	_	_	_	CT	:	20	

	Name of the topic	Hours	Marks
Unit -1	Basics of Power Generation		
	1.1 Importance of electrical power in day today life		
	1.2 Various sources of energy	02	06
	1.3 Overview of method of electrical power generation		
	1.4 Comparison of Sources of power.		
Unit - 2	Thermal Power Stations		
	2.1 List of thermal power stations in the state with their capacities		
	2.2 Selection of site for thermal power stations.		
	2.3 Main parts, block diagram of thermal power stations.		
	2.4 Quality of fuel and its effect on quality of power generation		
	2.5 Operation of following components:		
	2.5.1 Boiler	07	10
	2.5.2 Economizer.	07	10
	2.5.3 Air pre heater		
	2.5.4 Super-heaters & re-heaters.		
	2.5.5 Steam prime movers.		
	2.5.6 Condensers.		
	2.5.7 Spray ponds & cooling towers. (Block diagrams & description in brief)		
Unit -3	Nuclear Power Stations		
	3.1 Block diagram and working of Nuclear Power Station		
	3.2 Construction and working of Nuclear Reactor		
	3. 3 Fuels used in Nuclear Power Station	05	06
	3. 4 Economics of Nuclear Power Station		
	3. 5 List of Nuclear power stations in state & county with their capacities.		
Unit -4	Hydro Power Stations		
	4.1 List of Hydro Power stations with their capacities & number of units in the		
	state.		
	4.2 Selection of site and Classification	05	08
	4.3 Layout of hydro Power stations		
	4.4 Types of Turbines & generators used		
	4.5 Selection of turbine and alternator according to water head and capacity		
Unit -5	Diesel Power Stations		
	5.1 Applications of diesel power stations		
	5.2 Diesel electric plant- Main components (Block Diagram)	05	07
	5.3 Different types of engines & their working. Operation, maintenance & trouble		

6.1 Types of non-conventional energy sources. 6.2 Solar Energy 6.2.1 Potential of solar energy. 6.2.2 Photovoltaic effect – for solar energy. 6.2.3 Construction & materials used in solar photo-voltaic cells. 6.2.4 Working & applications of solar energy. 6.3.3 Wind Energy. 6.3.1 Selection of site for wind mills 6.3.2 Principle of electricity generation with the help of wind energy 6.3.3 Block diagram and working of Wind energy plant and its applications 6.3.4 List of major wind farms in the state with their approximate capacities 6.4 Bio-mass & Bio-gas energy. 6.4.1 Composition of Bio-gas & its calorific value. 6.4.2 Traditional; non-traditional Biogas plants 6.4.3 Bio-mass based power generation plants & their capacities. 6.5 Geo-thermal Energy and its Applications. 6.6 Ocean energy. 6.6.1 Ocean thermal Electric conversion. 6.6.2 Energy from tides 6.6.3 Site requirements 6.6.4 Advantages and Limitations of Tidal power generation. 6.7 Fuel Cells: Construction, working and applications  Unit -7  Terms commonly used in system operation: connected load, firm power, cold reserve, but reserve, spinning reserve. 7.2 Terms used in system operation such as Load-curve, load duration curve, integrated duration curve. (Simple numerical based on plotting above curves.) 7.3 Factors affecting the cost of Generation: Average demand, Maximum demand, plant capacity factor& plant use factor, Diversity factor& load factor. (Simple numerical based on above) 7.4 Choice of Size & number of Generator Units, difficulties involved in it.  Unit -8  Interconnected Power Systems 8.1 Combined operation of power stations. 8.2 Comparison of various types of power stations 8.3 Advantages of Interconnection. 8.4 Base load & peak loads, load allocation among various types of power stations. 8.5 Economic loading of interconnected stations. 8.6 Load sharing and transfer of load between power stations.	Unit -6	Non-Conventional Energy Sources		
6.2 Solar Energy 6.2.1 Potential of solar energy. 6.2.2 Photovoltaic effect – for solar energy. 6.2.3 Construction & materials used in solar photo-voltaic cells. 6.2.4 Working & applications of solar energy. 6.3.3 Usind Energy. 6.3.3 Selection of site for wind mills 6.3.2 Principle of electricity generation with the help of wind energy 6.3.3 Block diagram and working of Wind energy plant and its applications 6.3.4 List of major wind farms in the state with their approximate capacities 6.4 Bio-mass & Bio-gas energy. 6.4.1 Composition of Bio-gas & its calorific value. 6.4.2 Traditional; non-traditional Biogas plants 6.4.3 Bio-mass based power generation plants & their capacities. 6.5 Geo-thermal Energy and its Applications. 6.6 Ocean energy. 6.6.10 Cean thermal Electric conversion. 6.6.2 Energy from tides 6.6.3 Site requirements 6.6.4 Advantages and Limitations of Tidal power generation. 6.7 Fuel Cells: Construction, working and applications  Unit -7 7.1 Terms commonly used in system operation: connected load, firm power, cold reserve, hot reserve, spinning reserve. 7.2 Terms used in system operation such as Load-curve, load duration curve, integrated duration curve. (Simple numerical based on plotting above curves.) 7.3 Factors affecting the cost of Generation: Average demand, Maximum demand, plant capacity factor& plant use factor, Diversity factor& load factor. (Simple numerical based on above) 7.4 Choice of Size & number of Generator Units, difficulties involved in it.  Unit -8  Interconnected Power Systems 8.1 Combined operation of power stations. 8.2 Comparison of various types of power stations. 8.3 Advantages of Interconnected stations. 8.4 Base load & peak loads, load allocation among various types of power stations. 8.5 Economic loading of interconnected stations. 8.6 Load sharing and transfer of load between power stations.				
6.2.1 Potential of solar energy. 6.2.2 Photovoltaic effect – for solar energy. 6.2.2 Photovoltaic effect – for solar energy. 6.2.3 Construction & materials used in solar photo-voltaic cells. 6.2.4 Working & applications of solar energy. 6.3 Wind Energy. 6.3.1 Selection of site for wind mills 6.3.2 Principle of electricity generation with the help of wind energy 6.3.3 Block diagram and working of Wind energy plant and its applications 6.3.4 List of major wind farms in the state with their approximate capacities 6.4 Bio-mass & Bio-gas energy. 6.4.1 Composition of Bio-gas & its calorific value. 6.4.2 Traditional; non-traditional Biogas plants 6.4.3 Bio-mass based power generation plants & their capacities. 6.5 Geo-thermal Energy and its Applications. 6.6 Ocean energy. 6.6.1 Ocean thermal Electric conversion. 6.6.2 Energy from tides 6.6.3 Site requirements 6.6.4 Advantages and Limitations of Tidal power generation. 6.7 Fuel Cells: Construction, working and applications  Unit -7  Terms commonly used in system operation: connected load, firm power, cold reserve, hot reserve, spinning reserve. 7.2 Terms used in system operation: connected load, firm power, cold reserve, hot reserve, spinning reserve. 7.2 Terms used in system operation: Average demand, Maximum demand, plant capacity factor & plant use factor, Diversity factor & load duration curve, integrated duration curve. (Simple numerical based on above) 7.4 Choice of Size & number of Generator Units, difficulties involved in it.  Unit -8  Interconnected Power Systems 8.1 Combined operation of power stations. 8.2 Comparison of various types of power stations 8.3 Advantages of Interconnected. 8.4 Base load & peak loads, load allocation among various types of power stations 8.5 Economic loading of interconnected stations. 8.6 Load sharing and transfer of load between power stations.				
6.2.2 Photovoltaic effect - for solar energy. 6.2.3 Construction & materials used in solar photo-voltaic cells. 6.2.4 Working & applications of solar energy. 6.3 Wind Energy. 6.3.1 Selection of site for wind mills 6.3.2 Principle of electricity generation with the help of wind energy 6.3.3 Block diagram and working of Wind energy plant and its applications 6.3.4 List of major wind farms in the state with their approximate capacities 6.4 Bio-mass & Bio-gas energy. 6.4.1 Composition of Bio-gas & its calorific value. 6.4.2 Traditional; non-traditional Biogas plants 6.4.3 Bio-mass based power generation plants & their capacities. 6.5 Geo-thermal Energy and its Applications. 6.6 Ocean energy. 6.6.1 Ocean thermal Electric conversion. 6.6.2 Energy from tides 6.6.3 Site requirements 6.6.4 Advantages and Limitations of Tidal power generation. 6.7 Fuel Cells: Construction, working and applications  Unit -7  Economics Of Power Generation 7.1 Terms commonly used in system operation: connected load, firm power, cold reserve, hot reserve, spinning reserve. 7.2 Terms used in system operation such as Load-curve, load duration curve, integrated duration curve. (Simple numerical based on plotting above curves.) 7.3 Factors affecting the cost of Generation: Average demand, Maximum demand, plant capacity factor& plant use factor, Diversity factor& load factor. (Simple numerical based on above) 7.4 Choice of Size & number of Generator Units, difficulties involved in it  Unit -8  Interconnected Power Systems 8.1 Combined operation of power stations 8.2 Comparison of various types of power stations 8.3 Advantages of Interconnection. 8.4 Base load & peak loads, load allocation among various types of power stations 8.5 Economic loading of interconnected stations. 8.6 Load sharing and transfer of load between power stations.				
6.2.3 Construction & materials used in solar photo-voltaic cells. 6.2.4 Working & applications of solar energy. 6.3 Wind Energy. 6.3.1 Selection of site for wind mills 6.3.2 Principle of electricity generation with the help of wind energy 6.3.3 Block diagram and working of Wind energy plant and its applications 6.3.4 List of major wind farms in the state with their approximate capacities 6.4 Bio-mass & Bio-gas energy. 6.4.1 Composition of Bio-gas & its calorific value. 6.4.2 Traditional; non-traditional Biogas plants 6.4.3 Bio-mass based power generation plants & their capacities. 6.5 Geo-thermal Energy and its Applications. 6.6 Ocean energy. 6.6.1 Ocean thermal Electric conversion. 6.6.2 Energy from tides 6.6.3 Site requirements 6.6.4 Advantages and Limitations of Tidal power generation. 6.7 Fuel Cells: Construction, working and applications  Unit -7  Economics Of Power Generation 7.1 Terms commonly used in system operation: connected load, firm power, cold reserve, hot reserve, spinning reserve. 7.2 Terms used in system operation such as Load-curve, load duration curve, integrated duration curve. (Simple numerical based on plotting above curves.) 7.3 Factors affecting the cost of Generation: Average demand, Maximum demand, plant capacity factor& plant use factor, Diversity factor& load factor. (Simple numerical based on above) 7.4 Choice of Size & number of Generator Units, difficulties involved in it.  Unit -8  Interconnected Power Systems 8.1 Combined operation of power stations 8.2 Comparison of various types of power stations 8.3 Advantages of Interconnection. 8.4 Base load & peak loads, load allocation among various types of power stations 8.5 Economic loading of interconnected stations. 8.6 Load sharing and transfer of load between power stations.				
6.2.4 Working & applications of solar energy. 6.3 Wind Energy. 6.3.1 Selection of site for wind mills 6.3.2 Principle of electricity generation with the help of wind energy 6.3.3 Block diagram and working of Wind energy plant and its applications 6.3.4 List of major wind farms in the state with their approximate capacities 6.4 Bio-mass & Bio-gas energy. 6.4.1 Composition of Bio-gas & its calorific value. 6.4.2 Traditional; non-traditional Biogas plants 6.4.3 Bio-mass based power generation plants & their capacities. 6.5 Geo-thermal Energy and its Applications. 6.6 Ocean energy. 6.6.1 Ocean thermal Electric conversion. 6.6.2 Energy from tides 6.6.3 Site requirements 6.6.4 Advantages and Limitations of Tidal power generation. 6.7 Fuel Cells: Construction, working and applications  Unit -7  Economics Of Power Generation 7.1 Terms commonly used in system operation: connected load, firm power, cold reserve, hot reserve, spinning reserve. 7.2 Terms used in system operation such as Load-curve, load duration curve, integrated duration curve. (Simple numerical based on plotting above curves.) 7.3 Factors affecting the cost of Generation: Average demand, Maximum demand, plant capacity factor& plant use factor, Diversity factor& load factor. (Simple numerical based on above) 7.4 Choice of Size & number of Generator Units, difficulties involved in it.  Unit -8  Interconnected Power Systems 8.1 Combined operation of power stations 8.2 Comparison of various types of power stations 8.3 Advantages of Interconnection. 8.4 Base load & peak loads, load allocation among various types of power stations 8.5 Economic loading of interconnected stations. 8.6 Load sharing and transfer of load between power stations.				
6.3 Wind Energy. 6.3.1 Selection of site for wind mills 6.3.2 Principle of electricity generation with the help of wind energy 6.3.3 Block diagram and working of Wind energy plant and its applications 6.3.4 List of major wind farms in the state with their approximate capacities 6.4 Bio-mass & Bio-gas energy. 6.4.1 Composition of Bio-gas & its calorific value. 6.4.2 Traditional; non-traditional Biogas plants 6.4.3 Bio-mass based power generation plants & their capacities. 6.5 Geo-thermal Energy and its Applications. 6.6 Ocean energy. 6.6.1 Ocean thermal Electric conversion. 6.6.2 Energy from tides 6.6.3 Site requirements 6.6.4 Advantages and Limitations of Tidal power generation. 6.7 Fuel Cells: Construction, working and applications  Unit -7  Economics Of Power Generation 7.1 Terms commonly used in system operation: connected load, firm power, cold reserve, hot reserve, spinning reserve. 7.2 Terms used in system operation such as Load-curve, load duration curve, integrated duration curve. (Simple numerical based on plotting above curves.) 7.3 Factors affecting the cost of Generation: Average demand, Maximum demand, plant capacity factor& plant use factor, Diversity factor& load factor. (Simple numerical based on above) 7.4 Choice of Size & number of Generator Units, difficulties involved in it.  Unit -8  Interconnected Power Systems 8.1 Combined operation of power stations. 8.2 Comparison of various types of power stations 8.3 Advantages of Interconnection. 8.4 Base load & peak loads, load allocation among various types of power stations 8.5 Economic loading of interconnected stations. 8.6 Load sharing and transfer of load between power stations.				
6.3.1 Selection of site for wind mills 6.3.2 Principle of electricity generation with the help of wind energy 6.3.3 Block diagram and working of Wind energy plant and its applications 6.3.4 List of major wind farms in the state with their approximate capacities 6.4 Bio-mass & Bio-gas energy. 6.4.1 Composition of Bio-gas & its calorific value. 6.4.2 Traditional; non-traditional Biogas plants 6.4.3 Bio-mass based power generation plants & their capacities. 6.5 Geo-thermal Energy and its Applications. 6.6 Ocean energy. 6.6.1 Ocean thermal Electric conversion. 6.6.2 Energy from tides 6.6.3 Site requirements 6.6.4 Advantages and Limitations of Tidal power generation. 6.7 Fuel Cells: Construction, working and applications  Unit -7  Economics Of Power Generation 7.1 Terms commonly used in system operation: connected load, firm power, cold reserve, hot reserve, spinning reserve. 7.2 Terms used in system operation such as Load-curve, load duration curve, integrated duration curve. (Simple numerical based on plotting above curves.) 7.3 Factors affecting the cost of Generation: Average demand, Maximum demand, plant capacity factor& plant use factor, Diversity factor& load factor. (Simple numerical based on above) 7.4 Choice of Size & number of Generator Units, difficulties involved in it.  Unit -8  Interconnected Power Systems 8.1 Combined operation of power stations. 8.2 Comparison of various types of power stations 8.3 Advantages of Interconnection. 8.4 Base load & peak loads, load allocation among various types of power stations 8.5 Economic loading of interconnected stations. 8.6 Load sharing and transfer of load between power stations.				
6.3.3 Block diagram and working of Wind energy plant and its applications 6.3.4 List of major wind farms in the state with their approximate capacities 6.4 Bio-mass & Bio-gas energy. 6.4.1 Composition of Bio-gas & its calorific value. 6.4.2 Traditional; non-traditional Biogas plants 6.4.3 Bio-mass based power generation plants & their capacities. 6.5 Geo-thermal Energy and its Applications. 6.6 Ocean energy. 6.6.1 Ocean thermal Electric conversion. 6.6.2 Energy from tides 6.6.3 Site requirements 6.6.4 Advantages and Limitations of Tidal power generation. 6.7 Fuel Cells: Construction, working and applications  Unit -7 Economics Of Power Generation 7.1 Terms commonly used in system operation: connected load, firm power, cold reserve, hot reserve, spinning reserve. 7.2 Terms used in system operation such as Load-curve, load duration curve, integrated duration curve. (Simple numerical based on plotting above curves.) 7.3 Factors affecting the cost of Generation: Average demand, Maximum demand, plant capacity factor & plant use factor, Diversity factor & load factor. (Simple numerical based on above) 7.4 Choice of Size & number of Generator Units, difficulties involved in it.  Unit -8 Interconnected Power Systems 8.1 Combined operation of power stations. 8.2 Comparison of various types of power stations 8.3 Advantages of Interconnection. 8.4 Base load & peak loads, load allocation among various types of power stations 8.5 Economic loading of interconnected stations. 8.6 Load sharing and transfer of load between power stations.			09	14

(Simple numerical based on above) 7.4 Choice of Size & number of Generator Units, difficulties involved in it.  Unit -8  Interconnected Power Systems 8.1 Combined operation of power stations. 8.2 Comparison of various types of power stations 8.3 Advantages of Interconnection. 8.4 Base load & peak loads, load allocation among various types of power stations 8.5 Economic loading of interconnected stations. 8.6 Load sharing and transfer of load between power stations.				
### Comparison of Power Systems    Comparison of Size & number of Generation of Diversity factor & load factor. (Simple numerical based on above)		90		
6.6.3 Site requirements 6.6.4 Advantages and Limitations of Tidal power generation. 6.7 Fuel Cells: Construction, working and applications  Unit -7 Economics Of Power Generation 7.1 Terms commonly used in system operation: connected load, firm power, cold reserve, hot reserve, spinning reserve. 7.2 Terms used in system operation such as Load-curve, load duration curve, integrated duration curve. (Simple numerical based on plotting above curves.) 7.3 Factors affecting the cost of Generation: Average demand, Maximum demand, plant capacity factor& plant use factor, Diversity factor& load factor. (Simple numerical based on above) 7.4 Choice of Size & number of Generator Units, difficulties involved in it.  Unit -8 Interconnected Power Systems 8.1 Combined operation of power stations. 8.2 Comparison of various types of power stations 8.3 Advantages of Interconnection. 8.4 Base load & peak loads, load allocation among various types of power stations 8.5 Economic loading of interconnected stations. 8.6 Load sharing and transfer of load between power stations.				
6.6.4 Advantages and Limitations of Tidal power generation. 6.7 Fuel Cells: Construction, working and applications  Unit -7 Economics Of Power Generation 7.1 Terms commonly used in system operation: connected load, firm power, cold reserve, hot reserve, spinning reserve. 7.2 Terms used in system operation such as Load-curve, load duration curve, integrated duration curve. (Simple numerical based on plotting above curves.) 7.3 Factors affecting the cost of Generation: Average demand, Maximum demand, plant capacity factor& plant use factor, Diversity factor& load factor. (Simple numerical based on above) 7.4 Choice of Size & number of Generator Units, difficulties involved in it.  Unit -8 Interconnected Power Systems 8.1 Combined operation of power stations. 8.2 Comparison of various types of power stations 8.3 Advantages of Interconnection. 8.4 Base load & peak loads, load allocation among various types of power stations 8.5 Economic loading of interconnected stations. 8.6 Load sharing and transfer of load between power stations.				
Unit -7 Economics Of Power Generation 7.1 Terms commonly used in system operation: connected load, firm power, cold reserve, hot reserve, spinning reserve. 7.2 Terms used in system operation such as Load-curve, load duration curve, integrated duration curve. (Simple numerical based on plotting above curves.) 7.3 Factors affecting the cost of Generation: Average demand, Maximum demand, plant capacity factor& plant use factor, Diversity factor& load factor. (Simple numerical based on above) 7.4 Choice of Size & number of Generator Units, difficulties involved in it.  Unit -8 Interconnected Power Systems 8.1 Combined operation of power stations. 8.2 Comparison of various types of power stations 8.3 Advantages of Interconnection. 8.4 Base load & peak loads, load allocation among various types of power stations 8.5 Economic loading of interconnected stations. 8.6 Load sharing and transfer of load between power stations.		•		
7.1 Terms commonly used in system operation: connected load, firm power, cold reserve, hot reserve, spinning reserve.  7.2 Terms used in system operation such as Load-curve, load duration curve, integrated duration curve. (Simple numerical based on plotting above curves.)  7.3 Factors affecting the cost of Generation: Average demand, Maximum demand, plant capacity factor& plant use factor, Diversity factor& load factor. (Simple numerical based on above)  7.4 Choice of Size & number of Generator Units, difficulties involved in it.  Unit -8  Interconnected Power Systems  8.1 Combined operation of power stations.  8.2 Comparison of various types of power stations  8.3 Advantages of Interconnection.  8.4 Base load & peak loads, load allocation among various types of power stations  8.5 Economic loading of interconnected stations.  8.6 Load sharing and transfer of load between power stations.		•		
7.1 Terms commonly used in system operation: connected load, firm power, cold reserve, hot reserve, spinning reserve.  7.2 Terms used in system operation such as Load-curve, load duration curve, integrated duration curve. (Simple numerical based on plotting above curves.)  7.3 Factors affecting the cost of Generation: Average demand, Maximum demand, plant capacity factor& plant use factor, Diversity factor& load factor. (Simple numerical based on above)  7.4 Choice of Size & number of Generator Units, difficulties involved in it.  Unit -8  Interconnected Power Systems  8.1 Combined operation of power stations.  8.2 Comparison of various types of power stations  8.3 Advantages of Interconnection.  8.4 Base load & peak loads, load allocation among various types of power stations  8.5 Economic loading of interconnected stations.  8.6 Load sharing and transfer of load between power stations.	Unit -7	Economics Of Power Generation		
reserve, hot reserve, spinning reserve.  7.2 Terms used in system operation such as Load-curve, load duration curve, integrated duration curve. (Simple numerical based on plotting above curves.)  7.3 Factors affecting the cost of Generation: Average demand, Maximum demand, plant capacity factor& plant use factor, Diversity factor& load factor. (Simple numerical based on above)  7.4 Choice of Size & number of Generator Units, difficulties involved in it.  Unit -8 Interconnected Power Systems  8.1 Combined operation of power stations.  8.2 Comparison of various types of power stations  8.3 Advantages of Interconnection.  8.4 Base load & peak loads, load allocation among various types of power stations  8.5 Economic loading of interconnected stations.  8.6 Load sharing and transfer of load between power stations.				
7.2 Terms used in system operation such as Load-curve, load duration curve, integrated duration curve. (Simple numerical based on plotting above curves.)  7.3 Factors affecting the cost of Generation: Average demand, Maximum demand, plant capacity factor& plant use factor, Diversity factor& load factor. (Simple numerical based on above)  7.4 Choice of Size & number of Generator Units, difficulties involved in it.  Unit -8 Interconnected Power Systems  8.1 Combined operation of power stations.  8.2 Comparison of various types of power stations  8.3 Advantages of Interconnection.  8.4 Base load & peak loads, load allocation among various types of power stations  8.5 Economic loading of interconnected stations.  8.6 Load sharing and transfer of load between power stations.				
integrated duration curve. Prof. Arrora and Dr. V. M. Domkundwar	A course in Power Plant Engineering	Dhanpatrai & Sons				

# **BASIC ELECTRONICS (ELECTRICAL ENGINEERING GROUP)**

Subject Code		Theory		Full Marks : 100			Credits
1620305	No.	of Periods Per V	Veek				03
1020505	L	T	P/S	ESE	:	70	
	04	_	_	TA	:	10	
	_	_	_	CT	:	20	

	Name of the topic	Hrs/week	Marks
Unit -1	1.1 Semiconductor diode	III O W COR	1-141110
	1.1.1 Rectifying diode		
	Review of P-type and N-type semiconductor Junction of P-type & N-		
	type i.e. PN junction Barrier voltage, depletion region, Junction		
	Capacitance.	12	14
	1.1.2 Forward biased & reversed biased junction	12	14
	Diode symbol , circuit diagram for characteristics (forward &		
	reversed ) Characteristics of PN junction diode		
	1.1.3 Specifications:-		
	Forward voltage drop , Reversed saturation current, maximum		
	forward current, power dissipation Package view of diodes of		
	different power ratings (to be shown during practical hours)		
	1.2 Zener Diode:		
	Construction ( reference to doping level )		
	1.2.1 Symbol, circuit diagram for characteristics		
	( forward & reversed )		
	1.2.1 Avalanche & zener breakdown		
	1.2.3 Specifications:-		
	Zener voltage, power dissipation, break over current, dynamic		
	resistance & maximum reverse current.		
	1.3 Special Diodes:		
	Point contact diode , Schottky diode		
	1.4 Optical Diodes:		
	LED, IRLED, photo diode, laser diode.		
	Symbol, operating principle & applications of each.		
Unit -2	2.1 Rectifiers & Filters		
	Need of rectifier, definition	10	
	2.1.1 Types of rectifier – Half wave rectifier, Full wave rectifier		10
	(Bridge & centre tapped )		
	2.1.2 Circuit operation: Input/output waveforms for voltage &		
	Current, Average (dc) value of current & voltage (no derivation),		
	Ripple, ripple factor, ripple frequency, PIV of diode used,		
	transformer utilization factor, efficiency of rectifier.		
	2.1.3 Comparison of three types of rectifier		
	2.1.4 Need of filters		
	Types of filters		
	A] shunt capacitor B] Series inductor C] LC filter		
	D] π filter		
	2.1.5 Circuit operation, dc output voltage, ripple factor		
	(formula), ripple frequency, Dependence of ripple factor on load.		
	Input/output waveforms , limitations & advantages		

Unit - 3	Transistors		
	3.1 Bipolar Junction Transistor(BJT)		
	Introduction , Basic concept		
	3.1.1 Types of transistors , structure & symbols		
	Transistor operation		
	Conventional current flow, relation between different currents in		
	transistor		
	3.1.2 Transistor amplifying action		
	Transistor configurations:- CB , CE & CC		
	Circuit diagram to find the characteristics	12	14
	Input / output characteristics		
	3.1.3 Transistor parameters- input resistance, output resistance, $\alpha$ , $\beta$ &		
	relation between them.		
	Comparison between three configurations		
	3.1.4 Transistor specifications:		
	$V_{CE\ Sat}$ , $I_{C\ Max}$ , $V_{CEO}$ , $I_{CEO}$ , $\alpha$ , $\beta$ $V_{CE\ Breakdown}$ , Power dissipation ( to be		
	explained during practical using data sheets)		
	3.1.5 Testing of transistor using multimeter ( To be shown		
	during practical)		
	3.1.6 Construction, working principle, characteristics of Photo		
	Transistor Introduction to opto-coupler		
	3.2 Unipolar Transistor (JFET)		
	Construction, working principle & characteristics.		
	3.3 Unijunction Transistor(UJT)		
	Construction, working principle& characteristics.		
Unit - 4	Biasing of BJT		
	4.1 Introduction, need of biasing, concept of dc load line,		
	selection of operating point (Q point), need of stabilization of Q point,		
	(thermal run away concept)		
	4.2 Types of biasing circuits		
	A] Fixed biased circuit		
	B] Base biased with emitter feed back	4.0	4.0
	C] Base biased with collector feed back	10	10
	D] Voltage divider		
	E] Emitter biased		
	4.3 Circuit operation of each circuit.		
	4.4 Introduction to two port n/w		
	Hybrid model for CE		
Unit - 5	Regulated Power Supply		
	5.1 What is a regulator?		
	5.1.1 Need of regulators , voltage regulation factor		
	5.1.2 Concept of load regulation & line regulation		
	5.1.3 Basic zener diode voltage regulator		
	5.2 Linear Regulators	08	08
	•		
	5.2.1 Basic block diagram of dc power supply 5.2.2 Transistorised series & shunt regulator – circuit diagram & operation 5.2.3 Regulator IC's – 78xx,79xx, 723 as fixed , variable & dual regulator.	US	08

Unit - 6	Small Signal Amplifiers		
	6.1 Concept of amplification		
	6.1.1 Small signal amplifier using BJT		
	6.1.2 Graphical analysis		
	6.1.3 Determination of current , voltage & power gain ,		
	Input & output resistance , phase shift between input		
	& output.		
	6.1.4 AC Load Line		
	6.1.5 Function of input & output coupling capacitors & criteria for the value selection.	12	14
	6.1.6 Function of emitter bypass capacitor & its value selection.	12	14
	6.2 AC equivalent circuit of transistor CE amplifier.		
	6.3 Single stage CE amplifier with voltage divider bias.		
	Its explanation.		
	6.4 Frequency response of single stage CE Amplifier, Bel,		
	Decibel unit. Bandwidth & its significance. Effect of		
	coupling & emitter bypass capacitor on bandwidth.		
	6.5 Introduction to CB & CC amplifier & List of applications.		
	6.6 Cascade Amplifiers ( Multistage Amplifier)		
	6.6.1 Need of Multistage Amplifiers, Gain of amplifier.		
	6.6.2 Types of amplifier coupling – RC, transformer & Direct coupling.		
	6.6.3 Two stage amplifier circuit diagram, working, frequency		
	Response, merits & demerits & applications of each.		
	Total	64	70

#### ELECTRICAL CIRCUITS AND NETWORK LAB (ELECTRICAL ENGINEERING GROUP)

Subject Code		Practical					Credits
1620306	No. o	of Periods Per V	Veek	Full Marks	:	50	01
1020500	L	T	P/S	ESE	:	50	
	_	_	02	Internal	:	15	
	_			External	:	35	

**CONTENTS: PRACTICAL** 

Skills to be developed:

#### **Intellectual Skills:**

- 1. Interpret results
- 2. Calculate values of various components for given circuits
- 3. Select instruments

#### **Motor Skills:**

- 1. Connect the instruments properly.
- 2. Take accurate readings.
- 3. Draw phasor diagrams and graphs.

#### **List of Practical:**

- 1) To observe A.C. waveform on C.R.O.and calculates average & R.M.S. Values, frequency, Time Periods.
- 2) To determine impedance & Plot the phasor diagram of R-L series circuit.
- 3) To determine the current and P.F. of R.C. series circuit.
- 4) To determine the current and P.F. of R.L.C. series circuit.
- 5) To determine the current and P.F. in R.L. Parallel circuit.
- 6) To determine the current and P.F. in R.C. Parallel circuit.
- 7) To determine the current and P.F. in R.L.C. Parallel circuit.
- 8) To verify the line and phase values of voltage & current in star connected balanced load & Compare with practical situation.
- 9) To verify the line and phase values of voltage & Current in delta connected balanced load & Compare with practical situation.
- 10) To verify the superposition theorem applicable to D.C.& A.C. circuit.
- 11) To verify Thevenins theorem applicable to D.C.& A.C. circuit
- 12) To verify Norton's theorem applicable to D.C.& A.C. circuit
- 13) To verify the maximum power transfer Theorem applicable to D.C. & A.C. circuit.
- 14) To verify conditions for Series and Parallel Resonance

#### LIST OF PRACTICE ORIENTED PROJECTS:

- 1) To observe Response of R; L; and C to A.C. supply. Observe the current and voltage wave forms on C. R. O. and determine magnitude and phase angle of voltage and current.
- 2) To obtain Resonance in R-L-C series circuit and study the quality factor and bandwidth. Give applications
  - of series resonance circuit and Draw the curve showing variation of R,XL,XC,I with F.

To verify KCL, KVL, Superposition theorem, Thevenin's theorem and maximum power transfer theorem applicable to A.C. circuits.

#### ELECTRICAL MEASUREMENTS LAB (ELECTRICAL ENGINEERING GROUP)

Subject Code	Practical						Credits
1620307	No. of Periods Per Week			Full Marks	:	50	01
1020507	L	T	P/S	ESE	:	50	
	_	_	02	Internal	:	15	
	_	_	_	External	:	35	

**CONTENTS: PRACTICAL** 

Skills to be developed:

#### **Intellectual Skills:**

- 1. Identification of instruments
- 2. Selection of instruments and equipment for measurement

#### **Motor Skills:**

- 1. Accuracy in measurement
- 2. Making proper connections

#### **List of Practicals:**

- 1. Measurement of Current and Voltages by Low range ammeter and voltmeter respectively with shunt and multiplier.
- 2. Measurement of Current and Voltages by Low range ammeter and voltmeter respectively by Using Current Transformer and potential Transformer.
- 3. Measurement of active and reactive power in three phase balanced load by single wattmeter method.
- 4. Measurement of active and reactive power in three phase balanced load by two wattmeter method and observe the effect of Power Factor variation on Wattmeter reading.
- 5. Calibration of Energy meter at various power factor by standard energy meter.
- 6. Measurement of energy in single phase & three phase balanced load using Electronic Energy Meter.
- 7. Measurement of Low resistance by Kelvin's Double Bridge.
- 8. Measurement of Medium resistance by Wheatstone bridge.
- 9. Measurement of Insulation Resistance by Megger.
- 10. a) Measurement of Resistance, Voltage, Current, Voltage, Current in A.C & D. C. Circuit by using digital multimeter.
  - b) Measurement of A.C. Current by Clip-on ammeter
- 11. Measurement of Earth Resistance by Earth Tester.
- 12. Measurement of Circuit Parameters by LCR meter.
- 13. Measurement of power factor of single phase and three phase load by PF meter and verifying through I, V and P measurement.
- 14. Observe the phase sequence of three phase circuit Using Rotating type phase sequence Indicator.
- 15. Measurement of Frequency of A.C. Supply Using Weston or Ferro dynamic type Frequency meter.

## BASIC ELECTRONICS LAB (ELECTRICAL ENGINEERING GROUP )

Subject Code	Practical						Credits
1620308	No.	of Periods Per V	Veek	Full Marks	:	50	01
1020300	L	T	P/S	ESE	:	50	
	_	_	02	Internal	:	15	
	_		_	External	:	35	

**\_CONTENTS: PRACTICAL** 

#### Skills to be developed:

#### **Intellectual Skills:**

- 1. Identification and selection of components.
- 2. Interpretation of circuits.
- 3. Understand working of Regulated dc power supply.

#### **Motor skills:**

- 1. Ability to draw the circuits.
- 2. Ability to measure various parameters.
- 3. Ability to test the components using multimeter.
- 4. Follow standard test procedures.

#### **List of Practical:**

- 1] To plot Forward & Reverse biased characteristics of diode.
- 2] To plot Forward & Reverse biased characteristics of Zener diode.
- 3] To Study the Rectifiers a] Half wave b] Full wave & draw i/p & o/p wave forms.
- 4] To Study the filter circuits. a] Capacitor Filter b] Inductor filter & draw wave forms.
- 5] To Plot Input & output characteristics of transistor in CE mode.
- 6] To Plot Input & output characteristics of transistor in CB mode.
- 7] To Plot Characteristics of FET.
- 8] To Plot Characteristics of UJT.
- 9] To study the Zener Diode as Regulator& calculate load regulation.
- 10] To study Transistor series and shunt regulator.
- 11] To study Single stage common emitter amplifier & plot its frequency response.
- 12] To study Two stage RC coupled amplifier & plot its Frequency response.

### ELECTRICAL WORKSHOP LAB (ELECTRICAL ENGINEERING GROUP )

Subject Code	Practical						Credits
1620309	No. of Periods Per Week			Full Marks	:	50	02
1020307	L	T	P/S	ESE	:	50	
	_	_	03	Internal	:	15	
	_	_	_	External	:	35	

#### **CONTENTS: PRACTICAL**

Note: All the experiments will be performed by using casing capping or conduit wiring, prepare schedule of material for each wiring work.

6. Wire up a test board 06 Hrs.

7. Wire lighting circuit for a go down wiring 08 Hrs.

8. Prepare & mount the energy meter board 08 Hrs.

9. Wire up consumer's main board with ICDP & distribution fuse box & 08 Hrs. With LCB / MCB

# ELEMENTS OF MECHANICAL AND CIVIL ENGINEERING (ELECTRICAL ENGINEERING GROUP )

Subject Code	Term Work						Credits
1620310	No. of Periods Per Week			Full Marks	:	25	02
1020510	L	T	P/S	Internal	:	07	
	_		04	External	:	18	

	Contents :Term Work	Hrs/week
	Name of the Topic	Hours
Unit -1	Boilers, Steam Turbines, Steam Engines:	
	1.1 Construction & working of Cochran & Babcock & Wilcox Boilers.	
	1.2 Construction & working of impulse & reaction turbines.	04
	1.3 Construction & working of steam engine	04
	1.4 Reasons for Malfunctioning, and remedial measures for boilers and steam	
	turbines	
Unit - 2	I.C. Engines:	
	2.1 Construction & working of two stroke &	04
	four stroke petrol & diesel engines	04
	2.2 Reasons for Malfunctioning, and remedial measures for I. C. Engines	
Unit -3	Air Compressors:	03
	3.1 Uses of compressed air.	U3
	3.2 Construction & working of single stage & two stage reciprocating compressor.	
	3.3 Screw compressor & centrifugal compressor- construction, working &	
	applications.	
	3.4 Reasons for Malfunctioning and remedial measures	
Unit -4	Pumps:	
	4,1 Types of Pumps and their working	03
	4.2 Reasons for malfunctioning and remedial measures	
Unit -5	Foundation for Machines:	
	5.1 Need for foundation	
	5.2 Material required for foundation	02
	5.3 Foundation Bolts: Types and Sizes	
	5.4 Criteria for Design of foundation	
	Total	16

#### List of Term Work:-

- 1. Trace the flue gas path and water steam circuit with help of boiler model.
- 2. Identify the possible location of fault/malfunctioning and decide how to repair them
- 3. Dismantling & assembly of Petrol/Diesel Engine.
- 4. Trial on single / multi cylinder petrol/ diesel engine.
- 5. Observe operation of Air Compressor and identify locations of fault and decide how to repair
- 6. Observe operation of a Centrifugal Pump and locations of fault and decide how to repair
- 7. Visit a thermal power station and observe functioning of Steam Turbine
- 8. Using Maintenance manuals prepare a maintenance schedule for a centrifugal Pump or Compressor

# PROFESSIONAL PRACTICES – III (ELECTRICAL ENGINEERING GROUP)

Subject Code	Term Work						Credits
1620311	No.	of Periods Per V	Veek	Full Marks	:	25	02
1020311	L	T	P/S	Internal	:	07	
	_	_	04	External	:	18	

	Contents :Term Work	Hrs/week
	Name of the Activity	Hours
Unit -1	Field Visits Structured field visits (minimum three) be arranged and report of the same should be submitted by the student, as part of the term work. The field visits may be arranged in the following areas / industries:  i) Visit to Electric Power Generation Station  ii) Visit to Wind Mill and/or Hybrid Power Station of Wind and Solar  iii) Multi Storied Building for Power Distribution Scheme  iv) Visit to a Multi Plex  v) Visit to a Captive Power Plant (Thermal)	28
Unit - 2	Lectures by Professional / Industrial Expert to be organized from of the following areas (any four)  i) Modern Techniques in Power Generation ii) Role of Power Factor Improvement a tool in reducing cost of generation iii) New trends for built environment iv) Software for drafting v) Digital Metering vi) Various government schemes such as EGS, vii) Industrial hygiene. viii) Hydro power generation ix) Special purpose wiring in chemical/hazardous industries	16
Unit -3	Seminar: Any one seminar on the topics suggested below: Students ( Group of 4 to 5 students) has to search /collect information about the topic through literature survey, visits and discussions with experts/concerned persons: Students will have to submit a report of about 10 pages and deliver a seminar for 10 minutes.  1. Water supply schemes/Problems of drinking water in rural area 2. Role of Traffic Signals in smooth flow of vehicles 3. Gram Swaraj Yojana 4. Schemes of power of generation in coming five years 5. Impact of load shading on rural population 6. Any other suitable topic	16
Unit -4	Market Survey: A group of four students is expected to collect information from the market regarding specifications and cost of any four items, used in Electrical wiring for domestic, commercial and industrial use	10
	Total	70
